### Basic Information

### Product Specification

- Highlight: Lightweight Valplast Partial Denture, Single Tooth Valplast Partial Denture, Lightweight valplast flexible partial dentures

### More Images

### Product Description

#### Advantages

Our

- Flexible and comfortable fit
- Lightweight and metal-free
- Natural-looking appearance
- Enhanced stability and retention
- Durable and fracture-resistant

### Key Features

**\*\*Flexibility and Comfort:\*\*** Flexible Dentures are made from a special thermoplastic material that offers flexibility and adaptability. This allows the denture to flex and conform to the natural contours of the oral tissues, providing a snug and comfortable fit.

**\*\*Lightweight and Metal-Free:\*\*** The thermoplastic material used in flexible dentures is lightweight, making them more comfortable to wear compared to traditional acrylic or metal-based dentures. They are also metal-free, reducing the risk of allergic reactions or sensitivities.

**\*\*Natural Appearance:\*\*** Our flexible dentures are designed to resemble natural teeth and gums, offering a natural-looking smile. The material can be color-matched to blend seamlessly with the patient's existing teeth or desired shade.

**\*\*Improved Stability and Retention:\*\*** Flexible dentures feature built-in flexibility that allows them to grip the natural contours of the oral tissues, providing enhanced stability and retention. This reduces the need for denture adhesives and minimizes movement during speaking and eating.

**\*\*Durability and Fracture Resistance:\*\*** The thermoplastic material used in our flexible dentures is durable and resistant to fractures, offering longevity and reliability.

### Indications

- Partial or full tooth loss (edentulous arch)
- Patients seeking a lightweight and flexible denture option
- Patients with thin or sensitive oral tissues

### Considerations

- Flexible dentures may require occasional adjustments to maintain an optimal fit as the oral tissues change over time.
- Proper oral hygiene and regular dental visits are essential for maintaining the health of the supporting oral tissues.
