Product Description

Description

Metal Free Composite Crown Onlay Inlay is a revolutionary dental product that is quickly gaining popularity among dentists and patients worldwide. It is a non-metallic dental restoration that offers a superior level of aesthetics and functionality, making it an excellent choice for those seeking a natural-looking and long-lasting dental solution.

Our Metal Free Composite Crown Onlay Inlay is made from the best quality composite resin material that is durable, strong, and resistant to wear and tear. It has been designed to offer excellent biocompatibility, making it a great choice for people who are sensitive to metals.

One of the most significant benefits of our Metal Free Composite Crown Onlay Inlay is that it closely mimics the appearance of natural teeth. It can be customized to match the color, shape, and size of the patients' existing teeth, providing a discreet and harmonious look. This is particularly important for patients who want to improve the appearance of their smile and dental structure without attracting unwanted attention.

Another advantage of Metal Free Composite Crown Onlay Inlay is its ability to blend seamlessly with the surrounding teeth. Its translucency and shading properties enable it to reflect light similarly to that of natural teeth, making it nearly undetectable. This is in contrast to metal restorations that are visible and can cause discomfort and self-consciousness for the patient.

Apart from its aesthetic benefits, our Metal Free Composite Crown Onlay Inlay also offers unmatched durability and longevity. It is resistant to wear and tear, chipping, cracking, and warping, making it an ideal choice for people who lead an active lifestyle. With proper maintenance and care, it can last for many years, making it a cost-effective option in the long run.

Our Metal Free Composite Crown Onlay Inlay is also easy to install and requires minimal preparation of the existing teeth. This means that patients can undergo the procedure without the need for extensive drilling, which can be painful and uncomfortable. Additionally, since it is a non-invasive procedure, patients can typically resume their daily activities immediately after the installation, without any downtime.

Another advantage of Metal Free Composite Crown Onlay Inlay is that it is compatible with a range of different dental procedures. It can be used for dental fillings, crowns, onlays, and inlays, making it a versatile product that dentists can utilize in many different situations.

Lastly, our Metal Free Composite Crown Onlay Inlay is available at competitive prices compared to traditional dental restorations. This makes it an affordable option for patients who wish to improve their dental structure, but are concerned about the costs associated with traditional dental procedures.

In conclusion, Metal Free Composite Crown Onlay Inlay is a groundbreaking dental product that offers significant benefits over traditional dental restorations. Its superior aesthetics, durability, and versatility make it an excellent choice for patients who want to enhance their smiles and dental structures. We are confident that our Metal Free Composite Crown Onlay Inlay will be an appealing offer to merchants looking for high-quality dental products that are both functional and aesthetically pleasing.

Production Introduction:

Inlays and onlays ensure conservation of sound tooth structure without undermining the tooth's mechanical and physical properties, while composite offers both the opportunity for correction before cementation and long-term reparability.

Customized

Product Feature and Application

The inlay: Typically used when the cavity is too large for a simple filling. The inlay is fabricated as a single, solid piece to fit the specific shape and size of the cavity. The inlay is then cement in place.

The onlay: More than an inlay, but not quite a crown, this restoration is characterized by the fact that it covers a cusp of the tooth and it is fabricated as a single, solid piece.

Deliver, Shipping and Serving

We accept STL files.

We accept normal impressions, you can send us by Fedex, UPS, DHL or Linex

We finish the jobs in 4-5 days once we receive your cases
