Product Description

Description

Introduction:

The Teeth Space Retainer is a revolutionary dental device that helps to straighten teeth and fix uneven gaps between teeth. This product is designed to provide a discreet and effective solution to orthodontic patients who want to straighten their teeth without having to resort to braces or other invasive treatments. Manufactured in China, this product is perfect for merchants who are looking for a high-quality and affordable solution for their customers' dental needs.

Key Features:

The Teeth Space Retainer is a custom-made dental device that is made specifically to fit the patient's teeth. Made from high-quality materials, this device is designed to provide a comfortable fit that does not cause any discomfort or irritation. The Teeth Space Retainer works by applying gentle pressure to the patient's teeth, which gradually moves the teeth into the desired position.

The Teeth Space Retainer is easy to use and can be worn during the day or at night. It is also easy to clean and maintain, making it an ideal solution for people who are looking for a low-maintenance dental treatment. The Teeth Space Retainer is suitable for patients of all ages, making it an ideal solution for orthodontic practices and dental clinics.

Benefits:

The Teeth Space Retainer offers a number of benefits for patients, making it an ideal solution for people who are looking for a simple and effective way to straighten their teeth. One of the main benefits of this product is that it is discreet and almost invisible, which means that patients can wear it without feeling self-conscious. Unlike braces, which are very noticeable, the Teeth Space Retainer is a much more subtle solution, making it a popular choice for patients of all ages.

Another key benefit of the Teeth Space Retainer is that it is much more affordable than traditional orthodontic treatments. Braces and other treatments can be very expensive, and many people cannot afford to pay for them out of pocket. The Teeth Space Retainer, on the other hand, is much more affordable, making it an ideal choice for patients who are looking for a cost-effective solution.

The Teeth Space Retainer is also very easy to use, which means that patients can continue with their normal daily activities without any interruption. Unlike braces, which require regular adjustments and appointments, the Teeth Space Retainer can be worn at home, which means that patients can save time and money.

Conclusion:

The Teeth Space Retainer is a high-quality orthodontic device that is designed to provide a discreet and effective solution for patients who want to straighten their teeth. Manufactured in China, this product is perfect for merchants who are looking for a reliable and affordable solution for their customers' dental needs. With its innovative design and advanced features, the Teeth Space Retainer is a popular choice for orthodontic practices and dental clinics throughout the world. Order now and enjoy the benefits brought by this product!

Production Introduction:

A space maintainer is an oral appliance made to "maintain" the space left behind by a missing baby tooth. They are generally made out of metal or acrylic and can either be fixed into the mouth or removable. Fixed space maintainers are cemented into the mouth, while removable space maintainers look similar to orthodontic appliances and may even have an artificial tooth. Their main function is to prevent the surrounding teeth from shifting into the space left by a baby tooth that was lost too soon. Once the permanent tooth begins to erupt, the space maintainer will be removed since it has served its purpose.

Product Parameter

Customized

Product Feature and Application

Dental space maintainers (or spacers) are devices used for kids who have lost some baby teeth but their permanent teeth have a while before they will grow in. They hold space for the appropriate adult teeth to grow in. They also prevent the remaining adjacent baby teeth from moving into the open space.

Types of Space Maintainer Appliances

- Band-and-loop device.
- Lingual holding arch.
- Transpalatal arch
- Distal shoe appliance
