Product Description

All-on-4/6 Dental Implants

"All-on-4/6" refers to a semi-full dental implant system, which is more complex to fabricate than traditional dental implants. High-quality All-on-4/6 implants enable dentists to easily fit patients and allow them to adapt to dentures more quickly. Creating these implants requires excellent equipment and, more importantly, experienced dental technicians.

Why Choose ADS China Dental Lab?

ADS China Dental Lab has a team of 10 skilled technicians dedicated to implant fabrication, each with over 10 years of experience. Their expertise ensures the prompt identification and resolution of any issues during the fabrication process, earning us the satisfaction of our clients.

Key Features

Reduced Implant Placement: Only 4 or 6 implants are needed, compared to the traditional 8, resulting in shorter healing times and lower costs for patients.

Natural Aesthetics: Prevents bone loss and maintains jawbone support, with dentures that look indistinguishable from natural teeth.

Pure Titanium Framework: Made from 100% biocompatible titanium, with excellent corrosion resistance.

Durability: Crafted using advanced CAD/CAM technology and high-quality materials, these implants can last 10-20 years with regular care.

Indications

Acrylic Pure Titanium All-on-4/6 Implants: Cost-effective and adaptable, but prone to damage.

Porcelain Pure Titanium All-on-4/6 Implants: Common, durable, and aesthetically pleasing, but expensive and difficult to repair.

Zirconia Pure Titanium All-on-4/6 Implants: Highly durable and beautiful, but costly and challenging to repair.

Considerations

Oral Scan Data: Send us oral scan data or impressions before and after tooth extraction and implantation to ensure precision and smoother adjustments.

Contact Us

If you need a reliable dental laboratory capable of producing high-quality All-on-4/6 implants, ADS China Dental Lab is here for you. Contact us for more details.
