Basic Information

Product Specification

- Fit: Precise
- Shape: Customizable
- Conservation Of Tooth Structure: Minimal
- Durability: High
- Material: Ceramic
- Compatibility With Other Dental Materials: Compatible
- Adhesion: Strong
- Resistance To Staining: Excellent
- Highlight: OEM composite inlay onlay ,
Crown composite inlay onlay ,
OEM composite inlay dental

Product Description

Introduction

ADS China Dental Lab is proud to introduce our Metal Free Composite Crown Onlay Inlay, a revolutionary dental product that combines superior aesthetics with exceptional functionality. This non-metallic restoration is ideal for patients seeking a natural-looking, durable, and biocompatible dental solution.

Key Features

Superior Aesthetics Crafted from high-quality composite resin, our restorations mimic the natural appearance of teeth. They can be customized to match the color, shape, and size of the patient's existing teeth for a harmonious and discreet look.

Durable and Strong Our composite crowns, onlays, and inlays are resistant to wear, chipping, cracking, and warping, ensuring long-lasting performance.

Biocompatible Ideal for patients sensitive to metals, these restorations offer excellent biocompatibility and pose no risk of metal allergies.

Seamless Integration With translucency and shading properties that reflect light similarly to natural teeth, our restorations blend seamlessly with the surrounding dentition.

Easy Installation Minimal preparation is required, making the procedure less invasive and more comfortable for patients.

Benefits

Natural Appearance Customizable to provide a natural and aesthetically pleasing smile.

Long-Lasting Durable enough to withstand daily use, making it a cost-effective choice in the long run.

Versatile Applications Suitable for various dental procedures, including fillings, crowns, onlays, and inlays.

Patient Comfort Non-invasive procedure with minimal downtime, allowing patients to resume their daily activities immediately.

Applications

Inlays Used for large cavities, fabricated as a single piece to fit the specific cavity shape and size, then cemented in place.

Onlays Covers a cusp of the tooth, offering more coverage than an inlay but less than a crown, fabricated as a single piece.

Considerations

Maintenance Regular dental check-ups and proper oral hygiene are essential for maintaining the longevity of the restorations.

Biocompatibility Suitable for patients with metal sensitivities or allergies.

Conclusion

ADS China Dental Lab's Metal Free Composite Crown Onlay Inlay offers a superior dental restoration solution that combines aesthetics, durability, and biocompatibility. Contact us today to learn more or to place an order.
