- Resistance To Fracture: High
- Layered Structure: Multilayered
- Esthetics: Natural
- Durability: Long-lasting
- Strength: High
- Highlight: dental layered zirconia crown,
dental lab layered zirconia crown,
dental lab dental zirconia crown and bridge

Product Description

Product Description:

One of the key benefits of the Dental Zirconia Crown and Bridge is its high resistance to staining. Zirconia is naturally resistant to discoloration and stains, ensuring that it retains its natural look for a long time. This is especially important for dental restorations, where the appearance of the teeth is a critical factor.

In addition to its resistance to staining, the Dental Zirconia Crown and Bridge is also highly resistant to fracture. This is because zirconia is an extremely strong and durable material that can withstand the rigors of regular use. This makes it an ideal choice for dental restorations that need to withstand the forces of chewing and biting.

Another advantage of the Dental Zirconia Crown and Bridge is its long-lasting durability. Unlike other dental restoration materials that may degrade over time, zirconia is a highly durable material that is designed to last. This means that patients can enjoy the benefits of their restoration for many years without needing to replace it.

The Dental Zirconia Crown and Bridge is specifically designed for dental restoration applications. Its multilayered structure ensures that it provides excellent performance and longevity, making it an ideal choice for a variety of dental restoration procedures.

In conclusion, the Dental Zirconia Crown and Bridge is a high-quality dental restoration product that offers many benefits. Its resistance to staining and fracture, long-lasting durability, and multilayered structure make it an ideal choice for dental restorations. If you are looking for a dental restoration product that provides excellent performance and longevity, then the Dental Zirconia Crown and Bridge is definitely worth considering.

Features:

Product Name: Dental Zirconia Crown And Bridge

Size: Customizable

Application: Dental Restoration

Durability: Long-lasting

Ease Of Use: Easy

Strength: High

Zirconia Stain Resistant: Yes

Zirconia Stain Resistant: Yes

Zirconia Stain Resistant: Yes

Technical Parameters:

Layered Structure:	Multilayered
Ease Of Use:	Easy
Application:	Dental Restoration
Resistance To Staining:	High (zirconia stain resistant)
Biocompatibility:	Excellent
Esthetics:	Natural
Fit:	Precise
Strength:	High
Translucency:	High
Resistance To Fracture:	High

Applications:

The ADS Dental Zirconia Crown And Bridge is perfect for a variety of different application occasions and scenarios. The product is ideal for patients who require dental restoration due to tooth loss, decay, or damage. The product can be used to restore individual teeth or multiple teeth, depending on the patient's needs.

The ADS Dental Zirconia Crown And Bridge is suitable for both anterior and posterior restorations, making it a versatile and practical product for dental practitioners. The product is also ideal for patients who have a high risk of zirconia stain due to their lifestyle or dietary habits. The high resistance to zirconia stain makes this product a great choice for patients who want a long-lasting and durable restoration solution.

The ADS Dental Zirconia Crown And Bridge is made in Shenzhen, China, using the highest quality materials and the latest manufacturing techniques. The product is designed to provide a comfortable and natural-looking restoration that blends seamlessly with the patient's existing teeth.

In conclusion, the ADS Dental Zirconia Crown And Bridge is a high-quality dental restoration product that is perfect for a wide range of application occasions and scenarios. The product is made from high-quality zirconia material, which offers high resistance to zirconia stain and a multilayered structure. The product is highly precise, and its comfortable and natural-looking design makes it an excellent choice for patients who require dental restoration.
